Paweł Prusko CV

Senior UX & Agent Experience Designer

Tel.: 693 600 920 | E-mail: pruskopawel@gmail.com | Localization: Warsaw | Link to Portfolio

Senior UX and Agent Experience (AX) Designer with 7+ years of expertise architecting complex digital products and AI-native ecosystems. Specialized in Agentic Workflows, Human-in-the-Loop (HITL) interactions, and Generative UI (GenUI). Leveraging a deep background in Data Experience and complex systems, I bridge the gap between abstract Large Language Models (LLMs) and end-user cognition. I focus on algorithmic transparency, latency masking, and strict UI guardrails that prevent context drift and ensure trust in autonomous multi-agent systems.

Core Competencies & AX Toolkit

- Agent Experience & AI-Native UX: Human-Agent Interaction (HAI), Multi-Agent Orchestration, Human-in-the-Loop, Generative UI, System Transparency, Latency UX.
- Explainable AI (XAI) & Algorithmic Trust: RAG (Retrieval-Augmented Generation) Data Grounding, Hallucination Mitigation, Confidence Scoring UI, Intent-to-Action Logic.
- Rapid Prototyping & Feasibility: Vibe-Coding, AI-Assisted Prototyping (Cursor, Figma Make, Claude), React/Tailwind Logic, Prompt Architecture as a UX tool.
- Core Product Design: Complex Systems Architecture, Information Architecture (IA), Cognitive Load Reduction, Figma Expert, WCAG 2.1+.

Professional Experience

Senior Data Product Designer & AI Specialist

STX Next | September 2025 – Present

- Agentic UX & Generative UI: Led the architectural shift from static analytics dashboards to dynamic, AI-generated interfaces. Designed conversational logic where agents autonomously generate specific UI components based on NLP intent.
- Multi-Agent Tooling: Architected modular system prompts and internal AI 'Gems' that automate UX research synthesis and validate complex data logic prior to frontend development.
- Rapid AX Prototyping: Designed functional Proof of Concepts (POCs) by bridging Figma layouts with code-based prototypes (using Cursor and v0), significantly reducing time-to-market for AI-intensive features.

Founder & Principal AX Architect

kcherry (Freelance/Consulting)

- Multi-Persona Agent Architecture: Engineered the UX and logic chain for a multi-agent system that dynamically adopts specialized personas to audit inputs, complete with strict guardrails to prevent context drift.
- RAG UX & System Transparency: Conducted IA audits for enterprise C-suite clients to optimize raw data structures for LLM context windows, designing interfaces that prioritize data grounding and source explainability.
- Pre-Engineering Logic Validation: Validated autonomous agent behaviors in sandbox environments before committing to backend engineering, protecting enterprise R&D budgets.

Senior UX Designer (Complex Systems & Data Pipelines)

Astek | February 2022 – August 2025

- Human-in-the-Loop Workflows: Designed critical approval flows for complex algorithmic systems, ensuring users maintained meaningful control over automated data processing and predictive models.
- Algorithmic UI Architecture: Collaborated closely with Data Scientists and Backend Engineers to translate raw machine learning outputs into intuitive, WCAG-compliant interface structures with clear error handling.
- Enterprise Design Systems: Established global, cross-functional guidelines and scalable UX components for corporate environments, standardizing the handoff between designers and data engineers.

Additional Experience

- Senior UX Designer | COI | October 2020 – January 2022
- UX & UI Designer | Reckitt Benckiser | February 2019 – September 2020
- Web Designer | Groupon | August 2016 – December 2018

Selected Agentic & AI Projects

- Autonomous Multi-Agent Platform (Data AI Advocate): Architected the AX and interaction chain for an orchestrated multi-agent system where specialized personas (Validator, Architect) execute parallel tasks. Designed real-time "chain-of-thought" visual states, context drift guardrails, and HITL approval nodes to ensure complete trust in automated advice.
- Generative UI Analytics Engine: Designed the interaction model for a prompt-driven enterprise platform that translates natural language (NLP) into dynamic, on-the-fly GenUI components. Replaced static dashboards with real-time, LLM-generated widgets backed by strict RAG data grounding and citation UX.
- Enterprise Co-Pilot & HITL Decision System: Engineered Human-in-the-Loop approval workflows for high-risk algorithmic processes. Created transparent confidence-scoring UI, source-explainability drawers (XAI), and fallback states that allow human operators to audit, override, or approve autonomous AI recommendations.

Education & Continuous Specialization

Formal Education & Technical Foundation

- Digital UX Designer (320h) | Coders Lab | 2019 (User-centric design, cognitive load reduction, information architecture, behavioral psychology, complex system workflows).
- Javascript & React Developer (400h) | Coders Lab | 2018 (Programming logic, component architecture, state management, API integration, code-based rapid prototyping).
- M.Sc. in Chemistry & Biology | University of Gdansk | 2009–2015 (Scientific research methodology, analytical data thinking, complex system modeling, logic validation).

Continuous Agent Experience (AX) & AI Specialization

- Agentic Workflows & Multi-Agent Orchestration: Deep research into Human-Agent Interaction patterns, multi-role agent persona frameworking, logic chain mapping, and Human-in-the-Loop approval nodes.
- Generative UI & Intent-to-UI Architecture: Dynamic on-the-fly component rendering, NLP intent mapping, prompt-driven data exploration, and automated interactive widget synthesis.
- Explainable AI (XAI) & System Transparency: RAG data grounding UI patterns, citation UX, confidence scoring visualization, latency masking ("thinking" visual states), and context drift mitigation mechanics.
- AI-Assisted Rapid Prototyping & Prompt Architecture: Advanced system prompt engineering, artifact elimination, guardrail mechanics, and vibe-coding prototyping across Cursor, v0, Claude, and Google AI Studio.

I agree to the processing of personal data provided in this document for realizing the recruitment process pursuant to the Personal Data Protection Act of 10 May 2018 (Journal of Laws 2018, item 1000) and in agreement with Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation).
